CARING FOR YOUR CANDLE

Our Candles have been lovingly poured for you to enjoy hours of fragrant bliss. To keep them working their best and safest for you please follow our guidance below.:

- Light your candle in a well ventilated room away from draughts or fans to avoid rapid uneven burning and to avoid disturbance of the flame. This will also keep the flame stable and allow it to burn correctly to minimise smoking.
- The first time you burn your candle, make sure you allow the full surface to become liquid wax, by burning for around 1.5-2.5 hours, as wax has a memory, and this will avoid your candle tunnelling i.e have wax around the edges and will give you longer to enjoy your candle.
- Keep the wick trimmed to 5mm and if it mushrooms, nip off the top to control the flame and smoke.
- **DO NOT LEAVE UNATTENDED AT ANY TIME!** and keep away from children and pets. Candles should be kept on a heat resistant base and set on a level surface.
- If soot forms on the inside of the vessel, extinguish the flame and wait for it to cool, wipe with a damp cloth, trim the wick and re-light candle.
- Stop burning the candle when 10mm of wax remains at the bottom, keeping an eye on the burning when the wax is low.
